

MHH.CO SERVICE BOX

Xentry Installation Guide:

Xentry Hang Solution:

If you install Xentry with a normal Xentry key (not a developer) everything should install fine however sometimes it doesn't (in my case) ☺

What should you do?

When Xentry setup copies the files to:

F:\programma\xentry directory, you should open the directory F:\programme\xentry\bin

There are 4 files: userconfig.xml, userconfig.xml.ja, userconfig.xml.ko and userconfig.xml.zh.

Just rename them during the copying of the files and the installation will continue fine.

Step 1:

Copy DLL: c:\windows\zak\starutils\commonlic.dll (the dll is in the starutils folder).

Step 2:

Run Star Utils and the Xentry keygen, generate then Save the key.

Step 3:

Go to DAS DVD: stardiag\InDia_Frame and run setup.exe (for Das 2010, the folder name is: Xentry_frame).

Step 4:

Click setup then installation completed.

Step 5:

Replace 3 files /xentry06-new version/

F:\Programme\xentry\bin\india\ com.dcx.licencesupport.jar

and

F:\Programme\xentry\bin\dlls\ CommonLic.dll

and

c:\windows\zak\starutils\commonlic.dll

Restart

And here it's done ☺
