

PCMtuner Module connections.

The below is a list of current active modules and how they should be connected to your PCMtuner hardware

When using **OBD** or **OBD-vr** read/write functions in vehicle it is advisable to use battery support. On some Diesel engines it is advisable to use Scantool and record any injector coding.

Not all **OBD** can be connected with breakout on **Bench** as they rely on other components in car such as immob to allow programming

Most MED/EDC/MEG17 ecu that can be read in **OBD** can also be read in **Bench** with module 71

Not all ECU's support identification with **OBD-vr** you may need to use scantool to get ECU information to find ORI file

Bench	direct connection to ECU header pins on bench
BSL	Connection to ECU and to PCB (ecu opened) (expert)
OBD	Connection via Vehicle OBD socket
OBD-vr	Connection via Vehicle OBD socket, Virtual read only, or write only
